

Town of Angier Backflow/Cross Connection Test and Maintenance Policy

The Town of Angier requires all water customers with backflow assemblies on their property to follow the test and maintenance procedures described in the Water Quality/Backflow ordinance. (section 17-31b) The customer can decide not to have the assembly tested if they agree to have the water service shut off. The service shall not be returned to the customer until a reconnection fee has been paid and proper test and maintenance have been performed on the assembly.

I agree to this policy
